Chapter 9

You should be able to solve systems of equations by the method of substitution.

1. Solve one of the equations for one of the variables.
- 2.

Substitute this expression into the other equation and solve.

- 3.

Inequalities (Exercises)

In this chapter, we will investigate matrices and their inverses, and various ways to use matrices to solve systems of equations. First, however, we will study systems of equations on their own: linear and nonlinear, and then partial fractions.

9.1 Systems of

Equations. A set of equations is called a system of equations.

The solutions must satisfy each equation in the system. A linear equation in n unknowns has the form $a_1x_1 + a_2x_2 + \dots + a_nx_n = b$; where the variables are of first-degree. If all equations in a system are linear, the

The solution to a system of linear equations in two variables is any ordered pair that satisfies each equation independently. In this example, the ordered pair $(4, 7)$ is the solution to the system of linear equations. We can verify the solution by substituting the values into each equation to see if the ordered pair satisfies both equations.
