A heat balance sheet is an account of heat supplied and heat utilized in various ways in the system. Necessary information concerning the performance of the engine is obtained from the heat balance. The performance of an engine is generally given by a heat balance sheet. To draw a heat balance sheet for the I.C. engine, it is run at constant load and constant speed.

As the outdoor temperature drops, the output of your heat pump drops as well, while the heat requirement of your house increases. At some point (around 40 degrees) these two requirements match and this is called your balance point.

Understanding a Heat Pump Balance Point

A heat balance is another name for an energy balance. When you are looking at a system (some defined area in which material is entering, interacting, reacting, and perhaps leaving) you are interested in more than just the mass of material. You are also interested in its energy. This is because sometimes what you're doing to it is heating it until some or all of it vaporizes, or driving a reaction, or to reduce unwanted loss of heat, or for other reasons.
