To disengage the time-out feature, unscrew the set screw several turns with the provided Allen wrench. To re-engage, turn off the power supply and screw

Soldering, Desoldering and Rework System User Guide

Your MX-500P comes with a time-out feature designed to maximize the life of your tip cartridges. The time-out feature works by detecting a load difference at the tip and sensing whether the tip cartridge has been used during the past 25-30 minutes. If no load change is sensed, the power supply shuts off.

I own the Metcal MX500P power supply. The model that i own is the 1 without the display : My trouble is: when im using the power supply with the hadler (MX-H1-AV) my hadler after some minutes is going to get hotter in the middle of the hadling zone. So im thinking to open my power supply and replace all capacitors,maybe this could fix my problem or maybe the problem is the hadler it's self ?
