Download Ebook Plastic Part Design Guide

If you've ever built a plastic model kit, you've seen and know at least something about injection molding. It is a process where heated (molten) plastic is squirted (injected) into a cavity of a designed shape (the mold) and, once cooled, ejected out as a plastic part. Most molds are made of two sides.

Fundamentals of Plastic Part Design Part 4 - Ribs and Bosses

Consider specifying parallelism instead of flatness. If the plastic part is attached to another (especially a metal part),

Download Ebook Plastic Part Design Guide

unrestrained flatness is unimportant. The plastic part will follow the contour. Consider restrained flatness. Again if attached to another component, the plastic part will conform to the contour.
